WE'RE HIRING

Structural/Façade Engineer

Rickard Engineering – United Kingdom (remote)

Due to our company's current growth, we are looking for a talented Structural Engineer based in the United Kingdom to deliver high-quality and professional engineering across a range of projects both locally and internationally.

The ideal candidate is a self-motivated individual who can manage a project with oversight from proposal phase to certification. Reporting to head office in Australia, you must be comfortable working independently and remotely with the company having projects about to commence. This position has the potential to grow in to leading and developing our team in the UK.

Responsibilities

- Providing structural engineering analysis and design
- Preparing, reviewing, and checking engineering calculations, technical specifications and scopes of work.
- Working closely with clients through the project lifecycle to deliver value within project performance criteria.
- Ensuring technical solutions delivered during the study and design phases are compliant with design review processes and design quality requirements.
- Monitoring the progress and performance of project design teams and give input and provide feedback and support where necessary.

Qualifications

- At least 3-5 years' experience, 2 of which have been in GRC or façade engineering
- Experience working in collaboration with architects and builders
- Bachelor degree in Civil Engineering (BSc)
- Excellent written and verbal communication skills

About Rickard Engineering

Rickard Engineering provides structural and façade engineering services in Australia and worldwide. The aim of the company is to provide top quality engineering services in terms of durability, stability, economy, and constructability with our highly professional team with over 40 years' experience in business. Rickard Engineering is experienced in providing effective project communications with other project stakeholders. Our expert team is highly efficient in understanding project requirements and in collaborating with other stakeholders to deliver the design to meet architectural requirements.

Principal engineer, Charles Rickard has worked in the GRC and façade engineering industry in the USA, Singapore, Hong Kong, UK, the Middle East and Australia. He was Technical Secretary to the National Precast Concrete Association (NPCAA), in the 90s when he wrote the Australian Code of Practice for GRC. In 2021, we are proud to say that the company has grown to a team of over 20 persons with a turnover of around \$3.0 million. For more information, please visit www.rickardengineering.com.
